

Sodium Phosphate 3 mmol/mL Injection

The Issue: Sodium phosphate 3 mmol/mL injection is currently available in limited quantities only. NH has approximately 3 to 4 weeks of supply between current pharmacy stock and stock available in patient care areas.

Anticipated Availability: early May 2021

Clinical Use: hypophosphatemia (contains 4 mmol/mL sodium – 3 mmol/mL phosphate)

Practice Implications:

- Clinicians should be aware of this shortage and formulary alternatives.
- **The following conservation measures should be carried out immediately in order to ensure that our supply remains available for those patients where alternatives do not exist:**
 - Consider providing phosphate replacement via the oral or enteral route as clinically appropriate
 - Reserve existing supply of sodium phosphate injection for priority patient groups including parenteral nutrition patients and patients in whom potassium phosphate injection is not appropriate

Potential Alternatives*:

- Sodium phosphate oral solution (Phoslax®; contains 4.15 mmol/mL phosphate)
- [Potassium phosphate injection](#) (contains 4.4 mmol/mL potassium – 3 mmol/mL phosphate)
