

# NH Risk Stratification Tool Level of Care Guide for Adult Patients with COVID 19

**Purpose:** To provide guidance with clinical criteria to help physicians determine which patients should be admitted to hospital and what level of care they might require.

**This document DOES NOT replace clinical judgement for decisions to admit to hospital or referrals/transfers to ICU**

**Symptoms:** fever, fatigue, cough (with or without sputum production), anorexia, malaise, muscle pain, sore throat, nasal congestion, headache, or GI symptoms (diarrhea, nausea, vomiting etc.).
