

Reporting and SaferCare

With increased electronic data capture and standardized documentation practices in our electronic health record (EHR), Northern Health is working towards a single source of truth and providing real-time access to data via our clinical information systems and reporting outputs such as dashboards.

Access to data from the EHR improves opportunities for clinical and operational decision making, monitoring, and measurement, in addition to secondary uses such as data quality management, quality improvement initiatives, and research.

Examples of SaferCare Dashboards, Bed Boards, and Expanded Reporting Capabilities

- CareAware CareView dashboard displays patient care priorities
- Patient Flow bedboard aids capacity and flow management
- Capacity Management UHNBC Unit-level reports measure discharges, transfers, and bed occupancies
- Capacity Management UHNBC housekeeping reports

Improved Access and Coordination through the ID Hub

Northern Health strives to support and provide quality information. The Information & Data (ID) Hub is the place to send your requests for data and health information.

The NH data holdings catalog has also been published to aid health professionals interested in undertaking research in the NH region. For more information, visit www.northernhealth.ca/for-health-professionals/research
